

LUGGAGE STORAGE SYSTEMS

Combined luggage compartments

Dedicated to clients of airports, shopping centers, stations and other public establishments

We focus on providing modern products – viz. combined luggage cabinets with self-service lockers whose capacity and external appearance are custom-made and adjusted to the conditions at the places where they will be used.

Nowadays, our products are present, among others:

- at the Warsaw-Okęcie Airport;
- at the ferry terminal in Świnoujście;
- in the fleet of Polish Steamship Company ferries;
- at several dozen railway and bus stations in Poland;
- in many foreign destinations;
- in the Czech Republic, Slovakia and Hungary.

height: 2100 mm
depth: 800 mm

GOLF CABINET

with two storage compartments

dimensions:
width: 400 mm
height: 2100 mm
depth: 800 mm

Our lockers are operated in an intuitive, fast and uncomplicated way which every user can cope with.

Advantages of the system for the end customer:

- ✓ self-service, safe deposit box which does not require the client to wait his turn- it will take you around three minutes to leave/collect your luggage
- ✓ various payment options for the service:
 - coins
 - payment cards (no anonymity)
 - tokens
- ✓ payments can be made for no longer than a 24 hours' time- later on, to collect your luggage, you will have to pay up the extra charge as displayed on the locker
- ✓ 100% security of stored luggage without fear of theft or access to third parties
- ✓ luggage can be also collected also in case of power failure in the locker network
- ✓ any disturbances in the operation of a locker will not affect the proper functioning of other lockers (each locker constitutes a separate system)

Overview of the service functions:

coin validator

LEDs informing about the (un) availability of a locker

Extra charge

The durability and comfort of use of our product is guaranteed by a careful production process: the walls of the cabinets are made of 2 mm thick galvanized steel sheet; the door is 2.5 mm thick. A proprietary program aimed at serving the lockers is perfectly matched to their functions and subject to improvements on an ongoing basis.

Advantages of the system for the locker operator:

- ✓ it is possible to combine different types of cabinets into complex strings of luggage storage systems with various dimensions
- ✓ three payment options at the programming stage: coin payments, payment cards or tokens
- ✓ 13,000 possible closing code combinations
- ✓ on-line supervision over proper operation of the lockers by connecting them to the Internet network
- ✓ a possibility of changing prices and time unit options for locker rentals (eg 2h, 10h, 24 h) control is possible from a smartphone and/or a computer

There is a possibility of providing lockers with door screens on which also advertising spots can be broadcast

If the locker key has been lost, it is not necessary to replace the lock.

In such a case, the master key is used and it will open the locker concerned; after inserting a new key- the lock of the locker concerned will automatically adopt it.

World class solutions in the field of secure luggage storage systems will guarantee an improvement in the category of the facility in terms of comfort, viz. access to auxiliary services. Increased is also customer satisfaction, since the users can appreciate innovative solutions tailored to their needs.
